

# NEXT GEN STRUCTURAL FOR ROBUST OPERATIONS

RACKS & ROLLERS
STORAGE TECHNOLOGIES AND AUTOMATION

## MEZZANINE SINGLE TIER & MULTI TIER

*An ideal solution to create more space in your warehouses is to make use of the extra overhead space by constructing Mezzanine floor system. It is an elevated floor space with access stairs, handrails, gates and even lifts.*

***Mezzanine floor can be put to a single tier or multi-tier use to multiply space twofold or threefold respectively.*** *It is by far the best way to take advantage of all the unused space at heights to create extra floor space without having to expand the warehouse.*

# MEZZANINE SINGLE TIER & MULTI TIER

*This new-found floor space can then be used for storage, offices, assembly lines, production, planning, or literally any other operation that you require.*

*Mezzanine is not only a multi-functional solution, but it is also unbelievably cost effective as compared to concrete structures. This is because it is extremely easy to install and uninstall. Once it fulfils its purpose in one area, you can easily dismount and assemble it in another area.* ***The assembly of Mezzanine is clean, quick and does not interfere with other operations as no metal welding is required.***

*This floor system is highly versatile and adaptable. Because it comes with a variety of sizes, structures, load bearing capacities, floor types and add-ons, Mezzanine can be put to endless multi-functional uses. It comes with strong stairways and high-quality handrails.* ***It is a completely secure way of multiplying your space that will not dig a hole in your pockets.*** *It is true that the cost of using a Mezzanine floor system is way less than that of buying more floor space.*

*The fact that it does not require a foundation and can be literally relocated anywhere without making a mess is what makes Mezzanine a go to solution for anyone who wants more storage in a smart and economical way.*

## MAIN FEATURES

### FULL SPACE UTILIZATION
*Make the most of your space without having to expand.*

### VERSATILE
*Comes in different varieties of load bearing capacities, floor space, sizes, profiles etc.*

### ADAPTABLE
*Can be used for storage, office, assembly or anything else.*

### EASY RELOCATION
*Quick and easy to install and remove.*

### ACCESSORIES
*Access stairs, handrails etc. are provided with the mezzanine floor system.*

### BEST SUITED FOR
*Areas where expansion of floor space is expensive or unavailable.*

### NOT RECOMMENDED FOR
*Special purpose warehouses.*

## PROS

- Maximum use of space
- Easy assembly
- Economical as compared to concrete structures
- Multi-functional use
- Super adaptable

## CONS

- This system is like creating another floor without any special features.
